

Ephemerides k. 756. b 6

Merlinus Liberatus. *pp. 265*

BEING AN

ALMANACK

For the Year of our Redemption,

1770

Being the second after *Bissextile*, or *Leap Year*;

And from the Creation of the World, according
to the best History, 5719,

And the 81st of our Deliverance by *K. William*
from Popery, and Arbitrary Government ;

But the 75th from the

Horrid, Popish, High-Church, Jacobite Plot.

Wherein is contained all Things fitting and useful for such a Work, as
an Ephemeris of the daily Motions of the Planets, with their various
Configurations, Aspects, Conjunctions, Lunations, Eclipses, Astrono-
mical, Astrological, Meteorological Observations, the Rising and Setting
of the Sun, Moon, Planets, and fixed Stars, illustrated with Tables of
the Tides, Terms, and daily Equation of Clocks, Length and Break,
Increase and Decrease of Days, Semidiurnal and Seminocturnal Arches
for several Latitudes, a Chronology, Remarks on the Divisions of the
Heavens, with Judgments of the Eclipses, with many other Things
relating to the Truth of Astrology.

Calculated for the Meridian of *London*.

Whose { Longitude } is { 24 } Degrees { 20 } Minutes.
{ Latitude } { 51 } { 32 }

By JOHN PARTRIDGE.

— *Etiam Mortuus l-quitur.*

LONDON: Printed by *M. HARRISON*, for the
Company of STATIONERS.

An Essay on Cœlestial Influences.

THE great Creator, blessed for ever in his works incomprehensible among other his various operations, he is admirably discovered in the constitutions of the air, and the general vicissitudes of the same, and mundane affairs, which is produced by secondary and inferior causes and generants; and those acted upon the theatre of the open air, being so near and previous unto man, that he may, by observation, arrive unto some apprehension of their secondary causes. All will believe that the sea comprehends all the seminal causes of her productions, and the earth whatever is bred in her bowels. The World has been convinced, in all ages, of the power of the heavens in forming the phænomenas in the air, viz. meteors, Halo's rainbows, parelia, parasæna, chasms, clouds, rain, mists, dews, fiery trajedions, lightning, thunder, blasting, frost, snow, hail, winds, &c. such as we call prodigious, and out of kind, yet the heavens cannot be totally excluded from their influences therein. Few are ignorant of the usual prognostics of rain and change of weather from fire, water, animates, and inanimates, which do owe their original from heat cœlestial, and it's consequent moisture having a secret impression upon the creature: the unusual motions and noises of the crow, cock, goose, ducks, owl, swine, water-fowl leaving their element, and flying farther into the country, the strange motions and postures of creatures, every body making their observations therefrom, they do not argue any divinations in the creatures, but a sensible disquiet and alterations that are felt in them at such times; not to mention the observations made by people inhabiting near the sea coast, viz. murmuring of the sea, bubbling and swelling thereof without noise, the breaking or dividing of the froth, these agitated by the dominion of the heavens upon the water, and a disturbance raised by cœlestial warmth; not to mention the sweating of walls and glass, the sucking of wood, cracking of wainscot, vial strings snapping asunder, argue the appulse of the moist atom upon the chill superficies. But here comes the puzzle, the state of the air is not uniform in all places.

no not in the same kingdom, province, or country. If I should relate the famous Kelper's instances of this nature in Germany, Poland, &c. mentioned in his ephemeris, I should be too prolix: and, indeed, there is no need, the common attestation of travellers, and the observation of the people in every town, comparing notes with their neighbours. We had no rain here, saith one; we had no fog at our town, saith another; we had no thunder, saith another; nor we had no hail (which indeed you shall not hear of two places, though near, agree in it's admission.) By this admirable variety, God is pleased to give us a remark of his power, that *he causes it to rain on one city, and not on another.* Amos iv. 7. This ought not to confound our contemplation and hypothesis, as the aforementioned Kepler was at this variety in his ephemeris in June, 1625, but, in September 1629; though with wonder, not confusion, he cries out, *Ecce quid cælum, quid terra, quid loca possint!* The variety of the airs, constitutions, whether permanent or transient, must be referred to the influence above, and the diversity must be referred to the quality and situation of the place, whether it be near a river, sea, or lake, whether it be hill or dale, sands or clay, all which contribute to the individual constitutions of hot, cold, dry, gross, moist, foggy, by way of cause material, or reduced to the efficient.

Ad Filium Terræ.

God made the heavens for man to view, the book
Of nature, on which man ought to look.

The stars the letters, whose influence fulfil

To man's dim sight the great Creator's will.

The thousandth part o'th' earth doth not appear

Unto thy sight, o'th' heavens the hemisphere.

Why fool-like flights thou one, admires the other?

Child-like the father flights, and loves the mother.

All persons that write unto me upon their own business, especially upon points of curiosity, wherein I can expect no profit, are desired to pay the postage of their letters, or they will be returned by

THOMAS WRIGHT.

A Table of the Moon's Age for every Day throughout the present Year 1770. Whereby, with the Help of the next general Tide-Table, the Time of High Water at all the Places above-mentioned in it are shewn by Inspection.

Days Month.	January.	February.	March.	April.	May.	June.	July.	August.	September.	October.	November.	December.

First find the Month in the Head of the Table, and the Day in the first Column on the left Hand, and in the Angle of Meeting you have the Day of the Moon's Age, with which enter the following Table, and find your said Number in the left Hand Column, and over against it in the other Columns is the Time of High Water at all the Places above-mentioned, by Inspection.

Example. January the 16th, I find the Moon to be 20 Days old, and over against 20 in the first Col. I find 7 Hours 00 Min. in the second Col. 5h 30' in the third, which is the Time of High Water at all those Places mentioned above in the 2d and 3d Columns.

Enter this Column with the Moon's Age.

[illegible]

Table of Terms and Returns, for the Year of our Lord 1770.

Hilary Term begins Jan. 23, ends Feb. 12.

Returns or Effoign Days.		Exc.	Ret.	App.	W. D.
Eight Days of St. Hilary,	Jan. 2	21	22	23	Tuesday
From the Day of St. Hilary in 15 Days,	27	28	29	30	Tuesday
On the Morrow of Purif. of bl. V. Mary, Feb. 2	4	5	6		Tuesday
Eight Days of the Purif. of bl. V. Mary,	9	10	11	12	Monday

Easter Term begins May 2, ends May 28.

From the Day of Easter in 15 Days,	April 29	30	31	2	Wednes.
From the Day of Easter in 3 Weeks,	May 6	7	8	9	Wednes.
From the Day of Easter in 1 Month,	13	14	15	16	Wednes.
From the Day of Easter in 5 Weeks,	20	21	22	23	Wednes.
On the Morrow of the Ascension,	28	29	27	28	Monday

Trinity Term begins June 15, ends July 4.

On the Morrow of the holy Trinity,	June 11	12	13	15	Friday.
Eight Days of the holy Trinity,	17	18	19	20	Wednes.
From the Day of holy Trinity in 15 Days,	24	25	26	27	Wednes.
From the Day of holy Trinity in 3 Weeks,	July 1	2	3	4	Wednes.

Michaelmas Term begins Nov. 6, ends Nov. 28.

On the Morrow of All Souls,	Nov 3	4	5	6	Tuesday
On the Morrow of St. Martin,	12	13	14	15	Thursday.
Eight Days of St. Martin,	18	19	20	21	Wednes.
Green Days of St. Martin,	25	26	27	28	Wednes.

V. B. No Sittings in *Westminster-Hall* on *Ascension-Day*,
Mid/summer-Day, and the 2d of *February*.

The *Exchequer* opens eight Days before any Term begins,
except *Trinity*, before which it opens but four Days.

Note, That the first and last Days of every Term are the
first and last Days of Appearance.

Unjust Desires are unconfin'd, by law,
'Twas made to keep unruly men in awe ;
'Tis physick for the body politic ;
Lay law aside, all quickly will grow sick.
Use lawyers when you've need, but study quiet ;
No wise man will make physick, daily diet.

January hath XXXI Days.

The Circles of the Sphere continued from my Last.

Six greater Circles mark you shall,
Which equally divide this Ball.
Just in the Midst between the Poles
From East to West the Equator rolles.

February hath XXVIII. Days.

The Ecliptic cuts him ; and doth slide
 Scarce twenty-four Degrees aside.
 Horison, even with the Ground,
 From Stars below our Sight doth bound.
 Meridian upright doth rise,
 Parting the East and Western Skies.

							12 56			of them rewarded
										according to their
										merit, <i>Fiat Justitia.</i>

March hath XXXI Days.

Two Colours through the Poles do run,
 Quartering the Circle of the Sun,
 One where the Spring and fall begin,
 The other where longest Days come in :
 Four lesser Circles, mark them well,
 Are to the Equator Parallel.

1	☐	18			2	8	☐	3 8	5 38	0 36	This Month should be of much Action, for many and various are the Configurati ons thereof, Tur key, Tartary. Muscovy, Poland, Bohemia, West-phalia, &c. are not idle. It is now Time for those People to look about them, and cry out, Arms, Arms, &c. Some Places in Italy are in deep Consulta The 19th of this Month 1744, was born our graci- ous Queen Char- lotte, whom God long preserve for the good of the Protestant Religi- on in Great Britain in particu lar, &c tion. Some mu- tiny, and other strange Actions.

June hath XXX Days.

For Stars: But in Geography
The Towns beside the Equator lie;
Over our Head, and under Feet,
The ninescore Azimuths do meet.
And here as many Parallels
Of Altitude Horizon tells.

July hath XXXI Days.

Longitudes and Meridians all,
And Azimuths, great Circles call.
But all their Parallels in Heav'n,
Being lesser, cut the Globe uneven,
Degrees three hundred and three score,
Hath every Circle, and no more. Finis.

1	☐			♊	☐	3 13	7 8	11 53	This Month is ushered in with the Square of the Infornunes from fixed Signs. Let us patiently wait for the Effects of it, which may be sudden and various when least expected in Things relating to the Macrocosm, both as to great Councils, and Affairs of Nations. Those Countries under Morn. Taurus and Leo will feel the Effects of War. The Grand Seignior's Affairs seem perplexed: But I hope England is happy under a prudent Prince. The Merchants too may expect large Returns about this Time.

August hath XXXI Days.

After a four Month's going backward, Jove,
Is now direct, and with bright Sol doth move
In glorious Trine. The rev'rend Clergy are
(As always God's, so now) their Prince's Care.
When the People Dirt upon the Churchmen fling,
Their next Work's to bedaub their sov'reign King

September hath XXX Days.

Farmers hast in the Harvest, for no Wonder
If this Month yield some Rain, and Claps of Thun-
Yet, if old Rules hit right, I see no Reason (der,
To fear, but it may prove a plenteous Season;
And when your Barns are full, forget not then,
To praise that God who is so good to Men.

October hath XXXI Days.

Bright Sol in Libra hath, with impartial Ray,
To Shades of Night equal'd the Beams of Day.
No Wonder Heav'n does right; but, alas! when
Shall we behold it practis'd among Men [stronger,
We'll wait a while, by Time Truth still grows
And fair Cloaks shall Knav'ry hide no longer.

1	—	—	2	14	12	Δ	10 36	9 45	2 24	We cannot expect the Affairs of this Month to vary from the preceding ones. An old Proverb says, Every Man for himself and God for us all. The Consultations of this Month are high and admirable. There are Hopes of Peace, and better Understanding amongst us than formerly. God preserve us from all Things destructive. News arrives from several Parts of Europe, and his Majesty of Great Britain much courted by foreign Princes. I hope to the Honour of the Nation in general, which I pray God grant. Amen.

November hath XXX Days.

Gently, my Friends, and easy, what News now!
 These little shamming Tricks will never do.
 So fair, so sweet, and mild, but yet look to't,
 Words are but Wind, fair Promises won't do't.
 Beware betimes, beware, your Ruin shun,
 Each Sycophant adores the rising Sun.

December hath XXXI Days.

The Year concludes, Time will its Circuit go,
Oh! could we see our Troubles ended too.
May Piety and mutual Love increase, (Peace,
And those be punished that would disturb our
Then shall our next more happy Tidings tell,
Mean Time, God save the King. Readers farewell.

Observations.

Many material
 Accidents do now
 apparently appe-
 rate amongst us.
 Time must unveil
 the Myſtrey. This
 Month great Dif-
 guſts may happen
 among Perſons of
 Quality, and other
 Tranſactions that
 I dare not adven-
 ture upon, well
 knowing none but
 one inſpired can
 predict Particu-
 lars. God rules
 all by his Provi-
 dence, and the
 Stars by his Per-
 miſſion. May he
 of his Goodneſs
 direct the whole
 Nation unto Uni-
 ty, and Peace, a-
 mong themſelves,
 and Loyalty and
 Obedience unto
 their Sovereign.
 Amen.

A TABLE of the Common Notes, and Moveable
Feasts for the Year of our Lord 1770.

N. B. In the Kalendar Part you will find the Planets South-
ing inserted to several Days in each Month; and by this
Table you may easily find their Rising and Setting: First
find the Longitude for the Day proposed, with which enter
this Table, and take out the Semidiurnal Arch thereof,
which being added to the Time of Southing, gives the
Setting; but subtracted the Rising.

P A R T R I D G E, 1770.

Of the Eclipses for the Year 1770.

WITHIN the circumference of this year there will be only two eclipses, and both of the Sun, and happen in the following order :

The first of these will fall on Thursday, the 25th of May, about half an hour past one in the morning ; it is a great and total eclipse in the southern parts of America, but it is invisible with us at London.

The second will be on Saturday, the 17th of November, at a quarter past ten o'clock in the forenoon, but this will not be visible here in England, because of the Moon's latitude being south, and that also augmented by her parallax of latitude (which is always the case in these northern regions) depresseth her below the Sun's limb ; therefore it is only visible in the remote southern parts of the globe. One of these eclipses happeneth before the Sun's apogæon, and the other after it, is the reason (according to the rules of astronomy) there will not be any eclipse of the Moon in this year.

Mr. H. Andrews, of Roylton, in Herts, who favoured me with the calculations of the eclipses for the two last years, tells me, he made a mistake, though an oversight, in the computations of the visible eclipse of the Moon that happened in December 1769, in the duration of it ; for the beginning thereof should have been 5 minutes 36 seconds later, and the end 5 minutes 36 seconds sooner. And, in the account of the transit of Venus, for Sun's horizontal, &c. read Sun's horizontal parallax, &c. Astrology is an excellent science, but most laborious and full of difficulty, as I myself have, in the course of my writings, sufficiently experienced ; therefore, to assist the young students, and the lovers of the art, I will perform what my present weakness is able, and give some choice astrological aphorisms, which have been huddled up in the Latin tongue, but now appear in our own language, through the rough stroke of my pen.

1. He who is naturally well affected unto astrology, shall verily pronounce more certain judgments.

2. Diverse

P A R T R I D G E, 1770.

2. Diverse effects of the stars are drawn forth from the stars, according to the various dispositions of the matter, whereof the astrologer ought very well to examine the several natures and qualities of the subjects receiving.

3. Sol and Mars are fiery, the heat of Mars is destructive, that of the Sun answers the vivifying heavenly fire.

4. The superior planets are most efficacious, the inferior are weak, and vastly do suffer by the superiors, and receive good or ill from them.

5. Superior planets, because they most resist, do not easily receive a detriment or assistance from the inferior planets.

6. The misfortunes proceeding from Saturn or Mars are mitigated, if their places are protected by Jupiter, being well-disposed and in good aspect.

7. When a planet, who is a fortune, is in conjunction with an infortune, he allays his malice, so that the infortune does no hurt.

8. The fixed stars are the most efficacious of all in their operations, for what actions they manifest or occasion are very great.

9. The fixed stars do imitate the nature and action of the erratics, or planets, wherefore they transfer their actions unto them.

10. The Moon hath a certain natural mutability, therefore she easily communicates to us the influence of the other stars.

11. The Moon doth then most especially transfer actions unto the inferior world, and the influx of the other stars from whom she is separated when she is swift in motion.

12. Three manner of ways the planets are varied and changed, by reason of their first qualities, of their houses and significations.

13. Saturn governs contemplation and memory, Mars boldness and fortitude, if they want not strength or are ill-disposed.

14. Retrograde planets degenerate from their proper nature, by that means fortunes are made infortunes, and the evil planets far worse.

15. Planets do manifest greater and worser evils when they are stationary than when they are retrograde.

16. The

P A R T R I D G E, 1770.

16. The reception of planets when they behold one another, if they be strong, doth diminish the malice of an evil aspect, and increase the goodness of a good aspect.

17. A planet in an angle, doth effectually produce his effects, but remits in cadent houses.

18. Be not too confident either of a sextile or trine aspect in violent signs, nor out of those signs in which the planets behold one another, yet essentially suffer.

19. Consider what things the planets perform not by their aspects, and observe if they do them not by their antiscians, for the antiscians have power and are to be enumerated among aspects.

20. It is rare if a planet prove a fortune in the eighth or twelfth houses, by reason of the malignancy of those houses.

21. The qualities of Saturn and Mars are not made better by their conjunction, being mixed so together, they are confounded and hurt very much.

22. Planets are notably made unfortunate by these accidents, *viz.* combustion, retrogradation, peregrination, detriment and fall.

23. The swift and various motions of planets are to be considered, as also their slowness, because when they vary, the accidents of the aspects do alter.

24. Saturn seldom applies to any planet, by reason whereof he signifies great princes and monarchs.

25. A partile aspect comes to pass within three degrees' difference; a platic aspect happens by the semi-diameter of the orbs of the planets.

26. The virtue of a planet is in that house, whose beginning or cusp a planet precedes by no greater space than these degrees.

27. Understand the simple qualities of the planets, for from thence thou shalt know all their mixed significations.

28. Those houses, which behold not the ascendent, signify occult or obscure places; and those houses are the twelfth, eighth, and sixth.

29. The application of planets show what is to come, the separation what is past, says Betham.

P A R T R I D G E, 1770.

Astrological Judgments for the Year 1770.

HALL, great interpreter! that doth inspire
Man's lofty genius with seraphic fire ;
Endows his soul with an exalted thought,
And makes him sovereign o'er this earthly vault :
That wherefo'er his prying fancy rove,
Through Neptune's kingdom, or the courts of Jove ;
Or through the bowels of the inferior world,
Where shapeless matter's in confusion hurl'd,
He finds hid truths, old time before conceal'd ;
And's bless'd with profit of such doubts reveal'd.
Assist me now, add vigour to my quill,
And guide my steps to clime Parnassus' hill.
Mount, mount, my soul ! up to the ethereal choir,
And let my pen describe what I admire.
The circled walks of the bespangl'd court,
Where Phænon, Jove, and Mavors do resort ;
Where flaming Phœbus runs his full career,
Where Phosphorus, Hermes, and plain Cynthia steer,
Their endless course ; and how their active pow'rs
Dart thence, upon this pretty ball of ours,
In pointed beams, and through deep caverns pass,
And form, to beauteous shape, the sluggish mass.

I. Of the Winter Quarter.

AS a premium to my astrological judgment for this year,
I shall begin with the Sun's entrance into the Tropic
of Capricorn, there being upward of two months of that
quarter included in this year ; therefore the winter quar-
ter begins on Thursday, the 21st of December, at 22 mi-
nutes before noon, apparent time ; when 25 degrees of
Sagittarius is on the medium cœli, and 17 degrees of
Pisces ascends the eastern finitor. In this ingress all the
planets except Saturn are above the earth, four of them
in the ninth, the sun in the tenth, the moon in the seventh.
There are four planets in Sagittarius, in the domal dig-
nities of Jupiter. The trade and commerce of the nation
is now, considering the season of the year, in a flourishing
condition.

P A R T R I D G E, 1770.

condition. As the Moon applies to the square of Saturn, as he is now placed, he will stir up some troublesome spirits, who, under the name of religion, will be ready to act rebellion. But I expect there will be debates and deliberations, with some contentions, among diverse great senators and counsellors of kingdoms and states; some of them will, I fear, under the most specious pretences of honesty, very much endeavour to protract the good resolutions taken to secure and preserve the public tranquillity, but let such be assured that their wicked designs will be timely discovered. The diseases of this quarter are such as afflict the back, convulsions, plurisies, and long continued diseases, most destructive to aged people, with the stone in the kidneys, pains in the knees; and thus ends this quarter with these lines:

Now Captain Winter, with his blustering crew,
Marches along, and makes a muckle do;
Lays his command on all; he strips the earth
Of all that in the spring her womb brought forth,
She's strip'd of all, looks barren, bare, and poor,
'Till Phœbus does again new life restore:
None 'scapes his rage, but all things must obey,
As well as earth he checks the raging sea.
He paves the rivers with an icy stone,
And sets them fast, that men may walk thereon;
He cloaths the fields with white instead of green,
And nothing of the summer's beauty's seen.
Cedars, as well as shrubs, must all submit,
And passively obey, as he thinks fit;
When he does bluster, who dares once oppose,
But rather meekly wear his frozen cloaths.
Nothing in nature's frame dares once rebel,
Nothing but rebel man and angels fell.

II. *Of the Spring Quarter.*

IT does commence at such time as the glorious lamp
of heaven, the Sun, touches the first point of Aries,
or the Earth Libra, which is this year the 20th of March,
1 hour

P A R T R I D G E, 1770.

1 hour 33 minutes, afternoon. Here we have 13 degrees of Leo ascending, and 24 of Aries on the medium cœli, and Saturn in the twelfth retrograde; Jupiter in the fourth, and Mars upon the cusp of the seventh; the Moon in the sixth, separating from the sextile of Mercury, and applying to the opposition of Saturn; the Sun and Venus in the ninth, and Mercury in the eighth. Thus are the heaven's posited at this ingress, which is the principal and main foundation in judging revolutions of the years of the world. Haly saith, *Major tamen potentia*, &c. the greatest power of signification of the accidents of the year is known from the separation and application of the Moon to the several planets; we presume that none will be so weak as to expect an absolute necessity on or concerning future accidents, but admit me, as others have before, to give my astrological conjectures, which have for many years been asserted with great verities: for Plotinus was wont to say, *Effectus infra lunam pæpe omnes a cœlo significari*, all things below the Moon were in a manner fully signified or discovered by the heavens; and Avicen, that was no friend to astrology, affirmed, *Cælum est animal obediens*, heaven is a creature obedient to God, and so I speak a word or two of this ingress: the aspects now do not look favourable as at the tropical ingress they did; so that it is now to be feared that if those good positions which did then attend us have not, by this time, happily had some good success in healing some former disputes and differences, I am afraid this will hardly effect it. As Mars doth afflict the seventh house, by his proximity, as being within 3 degrees of the cusp thereof, we may reasonably hope the mischief threatened by him to fall upon our enemies; the Sun and Venus in the ninth, and Jupiter in his domal dignities in the fourth, are good positions in the general, and happily secures us from the insults and menaces threatened by those two malevolent planets: but in those countries where they fall, it is to be feared their calamities will be very great; but I shall subscribe to the opinion of that famous mathematician and astrologer, Petrus Pilatus, who, in his Preface to his Diaria, giveth out this learned judgment: Among the sorts of future events,

P A R T R I D G E, 1770.

events, as the moving of heaven, the rising and setting of signs, the conjunction of planets, and eclipses of Sun and Moon, and such like, in which points is an infallible and indeterminate certainty, in respect of moment, and all hindrances are removed from them every way, unless God's predominant will and divine providence shall stay them miraculously and extraordinarily, which nevertheless useth ordinary and the natural instruments, with much more, importing the same conclusions, his only exception is, unless secondary causes be strangely forestalled, of the principal and first cause, which is God. The diseases incident to this quarter proceed from a cold cause, as the megrim, wind, cholic, cold rheums, coughs, pleurifies, pains in the back, yellow jaundice, and pestilence in many parts of the world; and so I conclude my observations with these poetical lines:

Winter adieu, and welcome pleasant spring,
Wherein the pretty birds do chirp and sing;
Among the buds, as if they'd pass their word,
Trees shall to them, and us, much fruit afford:
So joyful are they now in every field,
As if they knew they will great plenty yield;
And may not we, on better grounds than they,
Cast all distracting fears and cares away.

III. *Of the Summer Quarter.*

THIS begins at such time as the Sun enters the Tropic of Cancer, which this year happens on Thursday, the 21st of June, at 9 minutes before noon, when 28 degrees of Gemini is on the medium cœli, and 28 degrees of Virgo ascends, Saturn is in the eleventh, Jupiter in the third, Mars in the eighth, the Moon in the ninth, the Sun, Venus, and Mercury in the medium cœli; thus are the heavens posited at this ingress. Now the late opposition of the Sun and Jupiter will cause some difference about religious matters: some one of the long robe degraded, and much under-hand dealing; but, from the position of the Sun, Venus, and Mercury in the medium cœli, we conjecture that the state affairs, as to all manner of public business, *viz.* trade and commerce, are now, about this time, in a more flourishing condition than heretofore, and are like to continue, to the advantage and honour

P A R T R I D G E, 1770.

honour of the British nation. The diseases that are like to be this quarter will be over-heating of blood, by intemperate sports and pastimes, pestilential fevers, also choleric distempers, arising from putrefaction of blood; which brings me to consider the autumnal quarter.

Sol now in glory brings the longest day,
But soon returns, he makes no stop nor stay:
Let each industrious hand in time provide
A fit supply against cold winter's tide.
All things speak plenty now, and you thereby
May satisfy your taste, as well as eye.
What in the spring received a new birth,
Is now produc'd full ripe by mother earth;
So we proceed to the autumnal fall,
Which brings the latter fruit. Praise God for all.

Finis coronat opus.

IV. *Of the Autumnal Quarter.*

WHICH commences on Sunday, the 23d of September, at 15 minutes past 1 mane, at which time 20 degrees of Aries culminates, and 10 degrees of Leo ascends. Jupiter in the fifth and Mars, in opposition to him from the eleventh; the Sun in the third, Venus, Mercury, and the Moon in the fourth, Saturn in the ascendent; the Moon hastening from the body of Venus, and square of Saturn to void of course: thus are the heavens posited at this ingress. Now from the influences, at this time, we have hopes of some good approaching; and that there are persons fitly adapted to bring it to pass; and Mars doth well denote Saturn and Leo in his detriment, and, in the ascendent, bids Italy and Rome beware. It would make a man laugh to see a cardinal turn protestant. It was the devil that first taught that doctrine of divide and reign, and now as the dark-lanthorned saints will be at work, consulting how to undermine the church, forgetting that it is built upon a rock, and that the gates of hell shall never prevail against her; he that sets them to work will certainly pay them their wages. The diseases of this quarter are such as afflict the heart, consumption of the inward parts, noisome vapours, &c. with distempers incident to the knees. And thus I end my observations for this year with God preserve our gracious king and queen, and grant them a long and happy reign over these realms, and eternal happiness hereafter. Let us all say, Amen. The

P A R T R I D G E, 1770.

The Sun towards the southern tropic posts away,
 And nights do now grow longer than the day.
 The earth grows faint, having paid nature's due,
 Trees, plants, and herbs begin to languish too:
 All now becomes to the cold a sacrifice,
 And every plant and tree seemingly dies.
 The woods and trees lay by their summer's green,
 And, in short time, no such a thing is seen.
 The trees and plants are nip'd with dire frost,
 Then winds do bluster, and the sea is toss'd:
 These ne'er resist, but passively obey;
 Submit to power, 'tis power prescribes the way:
 Thus nature plays her part; and cannot we,
 Poor restless mortals! all as well agree.
 Come, let's unite, and let us all now sing,
 And pray God keep the church, and bless the king.
 Farewel, my little book, go take thy fate,
 And please, if possible, 'till out of date.
 The year concludes, Time will for no man stay,
 But circulates, and so doth pass away.
 May mutual love amongst us much encrease,
 And all those punish'd that disturb our peace:
 Then in my next I better things shall tell,
 Mean time, God bless us all; readers, farewell.

F I N I S.

* * Truly prepared and sold at Pickworth, in the county of Rutland, by Mrs. Wing, the widow of the late ingenious Tycho Wing, Gent. the genuine, and, as far as art can prescribe, the infallible medicine for all sorts of agues, whether quotidian, or other day ague, or tertian, or quartan or any other.

N. B. This medicine has been sold by the family for many years past, and has done numbers of cures beyond other remedies.

* * At Royston, in Herts, are taught the following, viz. Writing, in all the most usual hands; Arithmetic through all it's different rules, both vulgar and decimal, duodecimal and logarithmical, with it's application to trade and commerce: Mensuration, in all it's branches; also surveying gauging, dialling, cosmography, practical astronomy, the use of the globes, and maps, &c. &c. by H. Andrews, Philomath.

* * Lands surveyed, divided and inclosed, and maps thereof fairly delineated, and timber and polewood surveyed, valued and sold, by Vincent Wing, of Pickworth, in the county of Rutland; and Thomas Wright, of Eaton, in the county of Leicester, practitioners in the Mathematicks.
